RE: Wrentham Highlands/Meadows Proposal at 20 Hancock Street and 1139 West Street

Dear Members of the Board,

I thank you for your continued attention to the proposed developments at West and Hancock Streets, but I grow increasingly frustrated with the lack of meaningful submittals from the applicant. With the last Beals & Thomas response to the applicant I count **16** deferrals to future submittals or the board or Town authority. Some of these are clerical; a drawing update or definition. And others are fundamental. No septic plan design or how it will be maintained has been submitted. Why is there any consideration at public forums without a complete design? As a direct abutter, how many hours have either Megan or I spent over the last two years considering incomplete applications instead of with our family? We will continue to do so because we moved to a house that provided a home for generations and we will ensure 1187 West St. continues to do so.

The applicant has repeatedly referred to the Howard Stein Hudson supplemental data report App. G HydroCAD models. I cannot understand why there is no consideration for how groundwater will flow after there is feet of fill dumped in the field. How can AP1 and 219 be considered the same nodes in HydroCAD? Water will flow from my property counter clockwise all the way to the Lyon's? Or clockwise flooding me, Ms. Sozio, and the Sheldonville #2 Firehouse?

Thank you for your time and expertise in ensuring these matters are addressed.

Best regards,
R. Tyler Dawe, P.E., PMP
